REPORTS FROM MINING CAMPS

WORK RESUMED IN MONTANA COPPER FIELD.

Heinze Makes a Rich Strike in the Cora Mine-Wage Question in the Lake Copper District-Lake Freight Rate HOUGETON, Mich., Feb. 12.—The wage question in the Lake copper district depends on the price of copper, and it is believed here that if the price can be held at 13 to 14 cents, wages will not be reduced. The future market prospects of the metal are uncertain, but barring higher prices affected by the manipulation of strong financial forces, it is difficult to see materially higher prices in sight for some time to come. The world is now making more copper than it is con-

now making more copper than it is consuming.

The Centennial mill is out of commission

The time it will be for a few weeks, during which time it will be overhauled. The mill is of antique pattern and equipment, and compared with its big neighbors is a sort of coffee grinder, but it has served the purpose of aiding in the develop-ment of the new Centennial by making about

The decision of the people having an option on the Belt mine to discontinue work is indicative of the impossibility of doing anything in the way of floating new copper mining ventures in the Lake district under present conditions. The cost of opening and equipping a new mine is so great that the necessary capital for such ventures can be obtained only when the copper share market is boom-

ing.

There is a general impression that native copper is found only in the Lake Superior district. This is an error, as the virgin metal is found in several States of the Union, in Nova Scotia, Australia and at a dozen or more other points. Mr John Noian, in charge of diamond drill explorations for British gold mining companies on the west coast of Africa, says that native copper in exfoliated form, is occasionally found out-cropping in Ashanti, on the ivory coast. The only important fields where native copper is actually mined in considerable quantities are in Bolivia and Lake Superior. The Coro Coro mines of Bolivia carry two adjoining conglomerates, in which native copper occurs, copper ores being found with the native

The Isle Royale, which gave disappointing returns when the new mill was started, last May, is now doing much better, the miners having become better acquainted with the peculiarities of the rock. The mine is mak-

as is secured by the Wolverine
Recent smelting tests of copper mineral
secured from the rock of the Evergreen
lode at the Mass mine gave returns of 157
ounces of silver per ton, while the previous
test of mineral secured by stamping rock
from all the lodes opened gave ninety-five
ounces per ton. In view of the large silver
values evisting in the mineral, the company ounces per ton In view of the large silver values existing in the mineral, the company has decided that some process must be used by which the silver will be saved. The parting of the silver could be done most effectually by electrolysis, but it is possible that some smelting system can be devised by which the silver in the mineral can be saved to a great extent without turning out the copper product as electrolyte cathodes, which sell at lower prices than the Lake ingots.

to them is as an indication that a vein is not far distant.

The Butte Mine Exploration Company is cross-cutting from the 400-foot level of the Pacific mine, another of the properties on the east side and has found several good stringers of ore. Cross-cutting is being done both north and south to the veins and it is estimated that a distance of about 100 feet further will reach the veins.

a distance of about 100 feet further will reach the veins

The Boston and Montana smelters at Great Falls that have been having considerable trouble owing to the freezing of the water have just started up an auxiliary steam plant which will give sufficient power to keep the smelter running steadily until the ice breaks up in the river. With the starting up of all the works it is expected that the output of the smelter will be increased to the same capacity as last October, previous to the shutdown. Since the smelter started up again 1,400 tons of ore are being used daily from the Butte mines and this amount will soon be increased to between 1,800 and 2,000 tons.

STATION & SINKING MINING PUMPS.
Over 40,000 CAMERON pumps in daily satisfactory
use all over the world gives tangible proof of their
merit and confirms the claim for their superiority
over all others. They are conceded to be the most
durable, reliable and effective mining pumps on the
market to day, and while often imitated are never
equalled. For proof, inquire of any mining engineer; for catalogue and prices, write any of our resi-dent agents, or the A. S. CAMERON STEAM PUMP WORKS, Foot East 23d St., New York City, U. S. A.

through it.

Helland Feb 8.—The receipts at the United States of the largest in the history of the office for that month, amounting to \$190,760,83 as against \$159,425.35 for the corresponding month of last year. The receipts are the best index of the activity among the gold mines of Montana. The increase in receipts is due largely to the application of the cyanide process at a number of mines.

A contract has been let to the Allis-Chalmers Company for a 60-stamp mill for the Big Indian mine. Four miles south of this track of the mines of the largest deposits of free milling. The state of the day and will be run by capaciting gold ore in the United States. While it is of low grade, averaging about \$3.20 a ton, the deposit is large. The present development shows it to be \$80 feet wide, 150 feet deep and 720 feet in length. The same character of ore extends for a distance of 4.400 feet all midicated by surface pits. A series of mile mines and milling, even with the small mill, is about 50 cents a ton. The Big Indian is on the mined and milling, even with the small mill, is about 50 cents a ton. The Big Indian is on the mother lode, which is supposed to be the source from which the \$50,000,000 of placer gold taken out of Last Chance and other gulches crossing the lode came.

Work has been started sinking an additional 100 feet at the Empire mine. Superior Chalke Linden, Mich. This company of Lake Linden, Mich. This company has already spent \$25,000 in the development of the Empire mine. The progress is watched with interest, as it is the first venture of the Michigan copper mine owners in the Montana gold fields.

Three carloads of high-grade copper ore are on the way to the smelter from the Big Dick mine owned by Judge Kruger of Newark, \$2.5. This ore is very high, grade; seported to have closed a deal for the purchase of the Surke-Sweny sapphire ground at Yogo, mon for \$50,000. This sapphire ground has been under bond to the American Gem Mining syndicate, composed of the McClures and others for over a year and du

Ohio, as well as a tract of land near by. Pevelopment work will be begun at once.

NEVADA.

RENO, Feb. 10.—The most interesting news of the week in mining is the report of a rich strike ten miles north of Tonopah. From all around miners have stampeded to the new district and staked out every inch of ground. Tonopah is suffering from the pneumonia epidemic that caused a great exodus of miners and adventurers last month, but the camp is still very lively. One of the latest arrivals is Wyart Earp of the famous Arizona family of gun-fighters, who recently returned from Nome. Earp has opened a saloon and gambling joirs. He didn't clean up much either in the Klondike or at Nome, as luck seems to have deserted him since he acted as referee in the notorious Fitzsimmons-Sharkey fight in San Francisco, in which he gave the decision to Sharkey on a foul. Freight between Tonopah and the railroad at Sodaville will be hauled soon by traction engines. R. W. Calderhead of Dawson has two traction engines, each capable of hauling 75 tons of ore These trains will make three miles an hour and only three men are required to manage each of them.

The Ohio Tonopah Company is the name of

town, Ohio, which will develop the California. Colorado, Arizona and Utah claims at Tonopah. A double compartment shaft will be sunk and ledges will be opened by cross-cuts Another new company is the Tonopah Bonanza Mining Company, with H. Gates as President and A. C. Guanett, a prominent mining stockholder of San Francisco as Secretary. The company is sinking a shaft and the prospects are encouraging.

Cabin No. 2 mine at Olinghouse calon, Washee county, has been sold for \$30,000 to a San Francisco as ideate. The mine shows high-grade ore uown as low as 210 feet and the new owners will erect a stamp mill on the river and wash it by water power.

The reduction works here in Reno are now ready to handle lead, silver and gold ores. They have been equipped with the latest machinery. By the end of the month they will be ready to handle copper ores.

LAKE REGION IRON MINES.

DULUTH, Minn., Feb. 13.—Lake freights

They have been equipped with the latest machinery. By the end of the month they will be ready to handle copper ores.

LAKE REGION IRON MINES.

DULUTH, Minn., Feb. 13—Lake freights on iron ore will settle for the year at 80 cents a ton, the same as last year. The United States Steek Corporation fried to hold rates down to 75 cents, but Corrigan, Mckinney & Co., a Cleveland ore mining and shipping firm, stepped in and chartered 500,000 tons at 80 cents, thus fixing the market. This is a rate at which the larger boats can make a big profit and the smaller a reasonable one, and it is much fairer to the shipping interests than the 90 cent, rate that vessel owners attempted to establish.

Pickands, Mather & Co., of Cleveland, who have been for years mining operators of importance, are branching out very considerably, and expect to explore for ore on the Mesaba range extensively. They are supposed to be working with the new Buffalo Steel Company, which is erecting a large steel plant at Buffalo, and which has now control of the Witherbee. Sherman & Comines at Port Henry, N. Y., but of very few Lake properties. A large tonnage of Lake cres is essential to the operation of the company's projected furnaces, though the Port Henry mines are capable of great expansion. Pickands, Mather & Co., have also doubled the receiving capacity of their ore docks at Ashtabula, Ohio, and will receive far more of the receiving capacity of their ore docks at Ashtabula, Ohio, and will receive far more before.

A number of large sales of mineral lands on the Mesaba range have been made during the past few days at Duluth, chiefly to Eastern Iron-making interests, though the Eastern Railway of Minnesota, a James J. Hill concern, has also been an active buyer. It buys ore lands in order to hold as much tonnage of ore to come from the range as it can, the receiving reason in the same have bought three properties, containing a number of million tons of ore, for which they have pound. These ores also carry a royalty of 25 cents a ton to be paid w

ore formation.

The United States Steel Corporation will open the Sibley mine of the Vermillen range, which was a Carnegie property. It is now putting in extensive machinery. SEATTLE, Wash, Feb. 10—Haines is assuming the position of a mining centre since the new discoveries on Alder and Mush creeks. There is a large amount of out-fitting at this point and the rush has set in. The extent of the strikes is not yet known, but the mines are very accessible, even in

midwinter, and it is expected that several thousand miners will be on the ground by May 1.

The movement to the Koyukuk continues to increase and those who came out in the fall are returning in order to take in supplies and be in at the spring clean-up. This district is dividing the honors between Nome and the Klondike this season, and the output is expected to run into the millions.

The new route from Illiamana Bay to St. Michael is well patronized, although the tariff is necessarily very high, being \$500 for single passengers and \$5 a pound expressage. The distance is 500 miles and the snow is from five to eight feet deep. fiorses and sleds are used, with relays every thirty miles, making the route as comfortable as possible in a country hitherto regarded as inaccessible in the winter months.

At Valdes there is great activity in outfitting for the placer diggings on the Chestochena. Hundreds of tons of supplies are being sent in by dog teams, and all means of transportation known to the country. The diggings are 240 miles from Valdes.

Machinery for the oil fields of Cook Inlet is accumulating at Seattle, and from present appearances a great deal of development work will be done this season. Experts are also collecting from all the known oil regions on the continent, so the country will be well explored.

BRITISH COLUMBIA.

will be well explored.

BRITISH COLUMBIA.

SEATTLE, Wash., Feb. 10.—Le Rol mine at Rossland has let a contract to sink below the 1,000-foot level. The ore shipments from this property during the month of January were 20,400, and during the present month they will exceed 24,000. Le Rol No. 2 will aid in swelling the February production to about 40,000 tons. This mine is also being exploited to depth. Rossland Camp continues to improve.

The Canadian smelting works at Frail are being enlarged and improved by the addition of a 1,000-ton rock crusher and a refinery.

addition of a 1,000-ton rock crusher and a refinery.

The Granby smelter at Phoenix made its first shipment of blister copper to the refining works at Newark, N. J., the past week, and is now in position to ship regularly. Heretofore the Granby confined its operations to the production of copper matte. The Van Anda matte turned out by the Van Anda smelter on Texada Island is also consigned to the same works.

signed to the same works.

WASHINGTON.

SEATTLE, Feb. 10.—A strike of considerable importance is reported in the Beaver Lake mines, Chesaw district, eastern Washington, it was made in the face of a tunnel that had been driven ninety feet and the ore was fifteen feet in width while the vein is from twenty-five to thirty feet in width. It is gold and silver and carries values of from \$20 to \$40 a ton in these metals.

The sodium sulphate deposits near O'Kanogan River, are being examined by Seattle experts who expect to make them available in the manufacture of glass.

IN THE BLACK HILLS.

experts who expect to make them available in the manufacture of glass.

IN THE BLACK HILLS.

DBADWOOD, S. D. Feb. 11.—Michael McGufre and son recently shipped a quantity of copper ore from their property in the Pactocal district to an Eastern smelter for commercial test and received returns of 23 per cent. copper. Numerous small tests have been made on the ore, and have given returns as high as 40 per cent. This ore comes practically from the surface. A number of shafts have been put down, but the deepest is only sixty feet. The ore carries from \$2 to \$4 a ton in gold.

The second clean-up has been made at the Highland Chief cyanide mill, a mile from Deadwood in Spruce Gulch. The mill was started early in the winter after undergoing a compleremodelling. The crushing is done with twenty stamps in a solution of cyanide and by running 10-hour shifts it is possible to treat forty-five tons of ore daily. It is said for this plant that an extraction of 90 per cent is obtained, and if corroot it is better than a majority of cyanide mills in the Black Hills are doing.

D. C. Boley, who is heavily interested in mining in the Black Hills, and who operated the Rossiter cyanide plant in Deadwood under lease for two or three years, has returned from Chicago, where he has been working for the last year on an invention for the more rapid action of cyanide sclution in the extraction of values in gold ore. He has patented his invention and is in the Black Hills for the purpose of putting it in operation. It consists of an application of heated air, and Mr. Boley says that in from six to eight hours it is possible to obtain the result that require as many days under the old manner of using the cyanide process. He will give his invention a practical test as soon as he can make arrangements with the owners of some suitable mill.

DAHO. IN THE BLACK HILLS.

Boise, Feb. 9.—The company holding the option on the Edna group of gold and silver cuartz mines at Edna, Boise county, is pushing development work in the long tunnel. At 400 feet the vein is fifteen feet wide and the ore very rich in silver with considerable gold. Tonopan is suffering from the pneumona epidemic that caused a great exodus of miner and adventurers last month, but the camp is still very lively. One of the latest arrivals is Wyart Earp of the famous Arizona family of gun-fighters, who recently returned from Nome. Earp has opened a saloon and gambling joire. He didn't clean up much either in the Klondike or at Nome, as luck seems to have deserted him since he acted as refere in the notorious Fitzsimmons-Sharkey fight in San Francisco, in which he gave the decision to Sharkey on a foul. Freight between Tonopah and the railroad at Sodaville will be hauled soon by traction engines. R. W. Calderhead of Dawson has two traction engines, each capable of hauling 75 tons of ore These trains will make three miles an hour and only three men are required to manage each of them.

The Ohio Tonopah Company is the name of a new mining concern with offices at Youngstown, Ohio, which will develop the California, Colorado, Arizona and Utah claims at Tonopah. A double compartment shaft will be sunk and ledges will be opened by cross-cuts. summer. Owners of mines in Sheep Mountain and Scafoam districts, thirty miles south of Thunder Mountain, will also do considerable development work during the coming erable development work during the coming summer.

Oil has been found in an old well at Emmett, Ada county, and a drilling machine is at work. The opinion is gaining ground that southern Idaho is a great oil field.

The coal fields recently discovered near this city are being developed. The quality of the coal continues to improve with depth, and the owners announce that they expect before long to furnish the city with fuel.

SALT LARE, Feb. 10.—The Snow Flake of Tintic shows seven feet of ore that affords as much as 40 per cent lead and 30 os. silver per ton. The strike was made in the drift running northeast on the seven foot level. Vesterday's assay from samples from the latest strike on the Utah Queen of Dry Cafion, fulfilled all expectations. It revealed the presence of 375 oz. silver, 8.12 copper, 15 per cent. lead and \$3 20 gold, per ton. Of this quality of ore there are 18 inches, while everything indicates that the streak was made from a characteristic body. The marketing of this ore will begin at once.

FINANCIAL

Of Advance in Price of Stock.

SILVER

Orders for Treasury Stock of The Henson Creek Lead
Mines Co. will be received at the Company's office, as below, until close of business,
Thursday, Pebruary
20th, at 50 Cents a Share.

GOLD

After Feb'y 20th price will be 60 cents a share.

ELECTIONS AND MEETINGS.

United States Steel Corporation. Notice of ANNUAL MEETING.

Notice hereby is given that the first annual meeting of the stockholders of the United States Steel Corporation will be held at the principal office of the Corporation, at the building of the Hudson frust Company, No. 51 Newark Street, in the City of Hobokeh, County of Hudson, New Jersey, on Monday, the seventeenth day of February, 1992, at 12 o'clock noon, for the transaction of of Hoboken, County of Hudson, New Jersey, on Monday, the seventeenth day of February, 1992, at 12 o'clock noon, for the transaction of any and all business that may come before the meeting, including considering and voting upon the approval of the by-saws as amended, considering and voting upon the approval of the possibility of the Board of Directors, and appointments by the Board of Directors, and appointments by the Board of Directors of the Executive Committee or the Finance committee since the organization of the Corporation on February 25, 1801, as set forth in the minutes of the Board of Directors or of the Executive or Finance Committees, including the agreements with Messrs. J. P. Morgan & Co. Syndicate Managers, dated respectively March 1 and April 1, 1801, and January 3, 1802, the last being an agreement of final settlement and release; the election of independent auditors to audit the books and accounts of the Corporation at the close of the fiscal year.

The stock transfer books will be closed at the close of business on Saturday, the 25th day of January, 1902, and will be reopened at 10 o'clock in the morning of Tuesday, February 18th, 1802.

Hy cred of the Board of Directors.

KILLED BY A CONSTABLE. Shot a Man in a Saloon for Not Testifying

SCRANTON, Pa., Feb. 16.—Peter King was shot and killed this morning in a saloon kept by Thomas Sullivan of Minook, this county, by Michael Davis, constable of the borough of Moosic. There was an old feud between the men because King had refused to testify in a liquor case as Davis refused to testify in a liquor case as Davis thought he was going to do. When the men met in this saloon the quarrel was renewed, but they were separated.

Davis sat down and brooded over his fancied wrongs. Then he sprang to his feet, whipped out a revolver and pointed it at King. The crowd started forward, but Davis held them at bay with his revolver. Then he fired five times. The first two shots missed. The third passed through King's heart and the other two lodged in his abdomen. He died instantly. Davis was overpowered by the crowd and later sent to jail. He is married and aged 35. King was single and aged 27.
